EDUCATION

Sri Sairam Institute of Technology, Chennai

2024 – 2028

Bachelor of Technology (B.Tech) – Information Technology | CGPA: 8.57 / 10

N.S.N Matriculation Higher Secondary School

Higher Secondary Education (Class XII) | 87.5%

MCC Campus Matriculation Higher Secondary School

Secondary Education (Class X) | 88.0%

EXPERIENCE

Data Science Virtual Intern — CodTech IT Solutions Pvt Ltd

March 2026 – May 2026

- Completed a 42-day virtual internship focused on Data Science concepts and applications.
- Worked on data preprocessing, data analysis, and machine learning fundamentals.
- Gained hands-on experience through project-based learning using Python and related tools.

PROJECTS

Sanitation Co-Governance Intelligence Platform (SCGIP)

github.com/lithes-coder/Sanitation-co-governance

Technologies: Next.js, TypeScript, Prisma, SQLite, Server-Sent Events, Leaflet, Python (FastAPI)

- Built a real-time civic-tech platform where citizens report sanitation issues with photo + GPS evidence and co-verify resolutions with the Greater Chennai Corporation — aligned with UN SDG 6 (born at the B2G Hackathon).
- Engineered a severity-scoring engine (complaint type × ward risk × evidence) that auto-routes complaints to the right department with SLA deadlines, auto-generates corporation tickets, and auto-escalates breaches.
- Implemented three role-based portals (citizen / officer / admin), a live ward map with reverse-geocoded GPS pins, instant SSE notifications, and a tamper-evident audit log.
- Integrated a Python agentic AI assistant (FastAPI) answering queries over live complaint data, with bcrypt-hashed passwords and cookie-session auth.

GODMODE — Security Testing Automation Application

github.com/lithes-coder/godmode-security-scanner

Technologies: Python, Flask, HTML, CSS, JavaScript, Render

- Developed an end-to-end web application that automates security testing of web applications, simulating OWASP ZAP-style scanning.
- Implemented scanners for 10+ vulnerability classes including SQL Injection, XSS, CSRF, IDOR, broken authentication, and sensitive data exposure.
- Built an interactive dashboard with scan statistics, scan history, and professional HTML report generation with severity ratings and remediation steps.
- Deployed on Render.

Query Arena — Gamified SQL & Cybersecurity Learning Platform

github.com/lithes-coder/query-arena

Technologies: React, Vite, JavaScript, Supabase, Netlify

- Built a gamified web platform where users solve real SQL challenges — writing and executing queries against sandbox tables with instant validation, hints, and XP-based progression.
- Developed multiple learning modes: "Debug Arena" for fixing broken SQL queries, CyberQuest missions for cybersecurity awareness (phishing calls, fake UPI scams), and a word-connection puzzle game.
- Implemented secure authentication with Supabase (OAuth login, protected routes) and user dashboards tracking XP, progress, and challenge history.
- Deployed on Netlify with continuous deployment from GitHub.

Customer Satisfaction Analysis (Data Science Mini Capstone Project)

Technologies: Python, Pandas, Scikit-learn, Google Forms

- Conducted a survey-based study to collect customer feedback data; performed preprocessing, exploratory analysis, and predictive modeling.
- Generated insights to identify customer satisfaction trends and support data-driven decision-making.

Push-Up Counter using MediaPipe

Technologies: Python, MediaPipe, Computer Vision

- Developed a real-time push-up counting application using pose estimation, tracking body landmarks to count repetitions accurately for fitness activity monitoring.

Predictive Maintenance (Internship Project)

Technologies: Python, Pandas, Scikit-learn, Matplotlib, Pickle, HTML, CSS

- Developed a machine learning-based predictive maintenance system to identify potential equipment failures, with preprocessing, visualization, model training, and a simple prediction UI.

CNN Image Classification (Internship Project)

Technologies: Python, TensorFlow

- Built a Convolutional Neural Network model for image classification, applying deep learning fundamentals and evaluating performance on training and testing datasets.

ETL Data Pipeline (Internship Project)

Technologies: Python, Data Processing

- Developed an ETL workflow to extract, transform, and organize data for analysis, automating data preparation and improving data handling efficiency.

TECHNICAL SKILLS

Programming: C, Java, SQL

Web: HTML, CSS, JavaScript

Database: MySQL, SQLite, Prisma ORM

Backend: Flask, FastAPI, Supabase

Tools: Loopa, Freebuff, GitHub, Git, Netlify, Render

CERTIFICATIONS

- NPTEL – Python for Data Science (69%)
- NPTEL – The Joy of Computing using Python (58%)
- NPTEL – Developing Soft Skills and Personality (78%)
- NPTEL – Design Thinking: A Primer (69%)
- Data Science Virtual Internship Certificate – CodTech IT Solutions Pvt Ltd

AREAS OF INTEREST

- Full-Stack Development
- Data Science and AI
- Cybersecurity
- AI Agents

CODING PROFILES

- LeetCode
